Evidence for a vendor model under SR 26-2

How to build model-risk evidence for a vendor model you cannot see inside.

- [ ] 01 Section VII names four things to understand: conceptual soundness, design, development data, performance
- [ ] 02 For a closed frontier model, three of the four go only as far as the vendor publishes
- [ ] 03 Performance is the one you can still obtain: measure the model on your own data

WHY IT MATTERS

SR 26-2 excludes generative and agentic AI from its scope while the UK's SS1/23 pulls the same pipeline in. Here is the evidence set that survives both regimes.

From: *SR 26-2 Excludes Generative AI. Your Model Risk Obligations Don't.*
